

# ReliaGear® neXT power panel

Coming Q1 2020

The new ReliaGear neXT power panel represents the first in a family of products that unites the advanced technology of ABB circuit breakers with the robust reliability of GE panels to deliver a “Best of Both” solution from source to socket.

power panel

ReliaGear neXT integrates a full range of the innovative Tmax® XT plug-in circuit breakers, including the XT1, XT4, XT5 and XT7 for 3-pole applications.

The Tmax XT compact design and improved ampacity options enable better breaker density within the ReliaGear neXT panel and more 100% rated options.

Additionally, the Tmax XT with optional ABB Ability® integration can deliver advanced technologies, including remote monitoring, preventive maintenance and energy management via the cloud.

The ReliaGear neXT panel modular design offers simple field installations and modifications and provides an industry-first IP20 bus stack for “finger-safe” field work.
