XPress 7 and Servertech Just Made it Easier to Configure Your Ideal IT System

Rittal & ServerTech Provide the Ultimate Flexibility Solution

Rittal and Server Tech's long-standing relationship is based on the simple fact that they are both best-in-class in their own respective industries. Rittal, the global leader for industrial and IT enclosures, climate control, power management systems, and automation services partnered with ServerTech to provide a more flexible solution to our shared customers.

With today's ever-growing need to house and process more data, typical IT enclosures are undergoing a variety of modifications and upgrades. Rittal builds flexibility into each enclosure to manage modifications efficiently. ServerTech enhances that flexibility claim with a common chassis across all power distribution unit (PDU) families for "design once, run anything" simplicity.

Customers rank both Rittal and ServerTech as providing the highest quality products with the most valuable innovation.

Increase Your Possibilities

ServerTech's suite of advanced technologies for Smart, Switched and Metered PDUs were developed to satisfy specific data center requirements. By implementing a high density PDU with new Cx outlet technology, customers can combine two outlets in one.

- Cx outlets accept C14 and C20 plugs
- Easily balance loads with alternating phase technology
- Enable future equipment upgrades

The two most popular PDUs are the HDOT and HDOT Cx. Both can be found in the most demanding data centers worldwide ranging from small technology startups to Fortune 100 powerhouses. With the addition of the Cx outlet, customers can now have a PDU that provides the best density in the market and the ultimate flexibility for future equipment updates.

Now you can add PDUs to your Xpress 7 Order

Part Number	Description	Basic Data Text	Dimensions H x W x D mm (in)	Outlets C13	Cx	NEMA 5-20R
9982093	SMART MSTR PDU 208V 30A 1~	C2S36TE-2CAF2M99, MASTER, L6-30P, 10 FT CORD	1778 x 56 x 64 (70 x 2.2 x 2.5)	18	18	■
